Amateur radio started with morse code and it is so firmly entrenched in its tradition that an overwhelming majority of its advanced members cannot let go a requirement that defines their brotherhood. Amateur radio's biggest advancements are happening at levels which permit the lower class licensee's to participate in, since they cannot utilize the HF bands. This experimentation and development is confined to the bands above HF, interacting with today's technology; internet radio etc. If these talented individuals could access HF bands, a new level of innovation would be realized. Limiting licenses because of morse requirements restricts expansion of technology utilizing HF bands and defeats the purpose of amateur radio. Anyone who wants to learn morse and use it can of their own motives do so and to restrict new amateurs from higher level licenses because other amateurs want to impose an ancient technology requirement is unfair.
